

Input Form (IF)

Score: 4/5 — Minor gaps | Confidence: high

Benchmark: MILU | Context: North Indian Hindi-Medium Postgraduate Teacher — MCQ Evaluation Deployment

Definition: Whether the input signal encoding (text, audio, image parameters) matches deployment conditions.

Justification

Input form is well-aligned with the deployment. Both benchmark and deployment are text-only Hindi MCQs in Devanagari script (Unicode U+0900-U+097F), which is a high-resource pairing with mature NLP tooling. MILU enforces format uniformity (4 options, no images, no reading comprehension) [Q33] and applies INDICLID + Unicode filtering for language verification [Q34]. The dataset analysis confirms consistent formal Khari Boli register throughout the sample with no script mismatches or romanisation issues. Two minor form-level concerns reduce the score from 5: (a) ~3-4% of sampled items have truncated/missing question stems where tables or sub-item lists were lost during scraping, breaking item form integrity [DATASET-D37 through D44]; (b) Logical Reasoning items use Latin alphabet sequences inside Hindi wrappers, which is standard for competitive exams but introduces a slight English-literacy dependency [DATASET-D36].

ID	Evidence
D36	रचि ने परीक्षा में नमिनलखिति शुरुंखला दी है । TAB, TTZBB, TTBbb, TTTYBBB, TTTCBBB, _____. — Letter series with English alphabet labels — Logical Reasoning item

Strengths

- Devanagari Unicode rendering with consistent formal Khari Boli register matches deployment requirement [DATASET-D4, DATASET-D20].
- Format uniformity enforced via explicit exclusion of images, reading-comprehension passages, and >4-option questions [Q33].
- Language verification via INDICLID + Unicode filtering [Q34] and duplicate removal [Q35].
- Hindi is a high-resource language within MILU's scope, favouring inference performance [Q5, Q76].

Checklist

Checklist item definitions:

ID	Assessment Question
IF-1	Compare signal distributions between source and target
IF-2	Check if regional infrastructure supports data capture specs
IF-3	Identify domain-specific form differences
IF-4	Document form mismatches harming external validity

Checklist responses:

IF-1: Signal distributions match: text-only Devanagari Hindi in both benchmark and deployment. Formal Khari Boli register confirmed consistent across the validation sample [DATASET strength 1].

IF-2: Regional infrastructure supports text-only Hindi MCQ ingestion. Devanagari IME availability on mobile is mature though precise teacher-cohort adoption [NEEDS VERIFICATION]; mobile internet penetration is ~43% Bihar, ~46% UP per IAMAI/Kantar 2024 [WEB-4], implying capacity but with rural connectivity constraints.

ID	Evidence
WEB-4	Bihar internet penetration ~43%, UP ~46% (IAMAI/Kantar ICUBE 2024) — adequate for text-only Hindi MCQ but rural constraints exist.

WEB-5	Rural school internet access ~18% vs. urban 62% — relevant to enterprise deployment reach.
-------	--

IF-3: MCQ form (4 options + single answer) precisely matches deployment requirement [Q33]. No multimedia, no reading-comprehension passages, no >4-option items.

IF-4: Two minor form mismatches: (a) ~3-4% of items have form-corruption from scraping (truncated stems missing referenced tables/sub-items) [DATASET-D37 through D44]; (b) Latin alphabetic sequences inside Logical Reasoning items [DATASET-D36] — standard for Indian competitive exams but a minor structural artifact.

ID	Evidence
D36	रचि ने परीक्षा में नमिनलखिति शुरुंखला दी है । TAB, TTZBB, TTBBB, TTTYBBB, TTTCBBB, _____. — Letter series with English alphabet labels — Logical Reasoning item

Information Gaps

- Hindi Devanagari IME adoption rate among the specific postgraduate teacher cohort.
- Whether truncation defects observed in validation split also affect the test split.

Remediation

Gap 1: Approximately 3-4% of sampled items have truncated stems where referenced tables, sub-items, or sentences were lost during scraping.

Recommendation: Programmatically detect items whose options reference content (numbered statements, lettered sub-items, named sentences) absent from the question stem and exclude them prior to deployment evaluation; report exclusion rate transparently.
