

Input Content (IC)

Score: 2/5 — Significant gaps | Confidence: high

Benchmark: ARABICMMLU | **Context:** Non-Arab Tourists and Expats in Eight Arabic-Speaking Countries (ArabicMMLU Deployment)

Input Content definition: Whether individual datapoint content is culturally and contextually appropriate for the target region.

Each section below is followed by an evidence table. Three types of evidence are cited: [QN] — verbatim quotes extracted from the benchmark paper; [WEB-N] — web sources consulted during assessment; [DN] / [DATASET-DN] — sampled datapoints from the benchmark dataset, with an interpretation note.

Justification

Authentic ground-up sourcing from school exams across eight countries [Q1, Q26] is a substantial strength over translation-based prior work [Q5, Q6], and Palestine being a top-3 source country is materially better than the scaffold anticipated [WEB-3, WEB-4]. However, content distribution is severely unequal: Jordan contributes 6,000+ questions while some countries contribute as few as 100 [Q89]; Morocco lacks annotators and Maghrebi school-curriculum coverage [DATASET-D5]; Kuwait is effectively absent [Limitations.5]; and contested historical content is framed through Jordanian curriculum perspective [DATASET-D1, DATASET-D2, DATASET-D3]. OCR corruption in some Egyptian university items [DATASET-D23, DATASET-D24] introduces construct-irrelevant variance. Islamic Studies content is presented prescriptively from an internal Muslim perspective [DATASET-D14, DATASET-D35], misaligned with the non-Muslim tourist target population. Per the elicitation, pan-Arab framing is acceptable [A2], but the system should flag country-specific content — yet the benchmark's ground-truth treats Jordanian framing as the silent default for civic and historical questions [DATASET-D4].

ID	Evidence
Q1	"we present ArabicMMLU, the first multi-task language understanding benchmark for the Arabic language, sourced from school exams across diverse educational levels in different countries spanning North Africa, the Levant, and the Gulf regions." (p.1)
Q5	"Although large language models (LLMs) such as GPT-3.5 (Ouyang et al., 2022), BLOOMZ (Muennighoff et al., 2022), and Jais (Sengupta et al., 2023) have been pretrained with substantial coverage of Modern Standard Arabic (MSA), their reasoning and knowledge assessments are primarily conducted using datasets translated from English to Arabic (Sengupta et al., 2023; Huang et al., 2023), which means there is limited capacity to evaluate content specific to Arabic." (p.1)
Q6	"This reliance on translation systems not only demonstrates an Anglocentric approach (Ramesh et al., 2023; Talat et al., 2022) but also potentially introduces errors and biases." (p.1)
Q26	"The questions are sourced from eight different countries in North Africa (Morocco and Egypt), the Levant (Jordan, Palestine, and Lebanon), and the Gulf (UAE, Kuwait, and KSA)." (p.3)
Q89	"ArabicMMLU does not represent all Arabic countries equally. For example, we have collected over 6K multiple-choice questions from Jordan, while other countries are represented with only 100 questions or, in some cases, not at all." (p.9)

IC-1	Do inputs require region-specific cultural/geographic/dialectal knowledge?
IC-2	Does culturally sensitive content align with target culture?
IC-3	Flag inputs assuming Western-specific knowledge
IC-4	Regional annotator recruitment for culturally sensitive instances
IC-5	Document content issues harming content validity

Checklist responses:

IC-1: Yes — many inputs require region-specific knowledge of Arab history, geography, Jordanian/Egyptian/Palestinian curricula, and Islamic religious practice [Q72, Q73, DATASET-D1, DATASET-D14].

IC-2: Partially — pan-Arab framing is acceptable per elicitation [A2], but contested historical content (e.g., King Abdullah I and Zionism [DATASET-D1], 1948 events) is framed from Jordanian curriculum perspective without flagging this country-specificity, conflicting with the deployment requirement to flag rather than silently generalize country-specific content.

IC-3: Limited Western-specific content concern — some Geography items ask about non-Arab global facts (Kilimanjaro, Shanghai) [MINOR Concern 11], but these are general world knowledge rather than Western-specific cultural content. The more pressing issue is Jordan-specific content presented as default Arab content.

IC-4: Verified by 2 native Arabic speakers on 100 sampled questions [Q42], yielding 96% match [Q43] — but no Moroccan, Palestinian, or Kuwaiti annotators participated in collection or verification [Q31, Q96]. Palestinian-sourced contested content was verified by non-Palestinian workers.

IC-5: Documented content issues: (1) Jordan-skew (~6,000+ questions) vs. ~100 for others [Q89]; (2) Morocco's school-curriculum content largely absent [DATASET-D5]; (3) Kuwait effectively absent [Limitations.5]; (4) OCR corruption in university Egyptian items [DATASET-D23, DATASET-D24]; (5) Islamic Studies presented prescriptively for Muslim students rather than explanatorily for non-Muslim visitors [DATASET-D14, DATASET-D35]; (6) Jordanian-curriculum framing of contested historical events [DATASET-D1, DATASET-D2, DATASET-D3].

ID	Evidence
Q31	"The data construction process involved a total of 10 Arabic native speakers from different countries: 6 internal workers (1 Jordanian, 1 Egyptian, 1 Lebanese, 1 from UAE, and 2 from KSA) and 4 external workers (3 Jordanian and 1 Egyptian)." (p.4)
Q42	"Finally, we assessed the accuracy of our data collection by having two native Arabic speakers annotate 100 randomly sampled questions. They were provided with all metadata, including the answer key, and tasked with verifying the correctness of each sample using any available resources (e.g., search engines)." (p.4)
Q43	"We found that 96% of the questions and answer keys match on average, while the remaining could have incorrect answer keys." (p.4)
Q72	"We present the performance of open-source models on selected subjects that potentially contain Arabic-specific contexts." (p.7)
Q73	"These subjects include history, geography, civics, political" (p.7)
Q89	"ArabicMMLU does not represent all Arabic countries equally. For example, we have collected over 6K multiple-choice questions from Jordan, while other countries are represented with only 100 questions or, in some cases, not at all." (p.9)
Q96	"We extend our gratitude to all collaborators from Jordan, Egypt, Lebanon, UAE, and Saudi Arabia who participated in the data collection process." (p.10)
